Document: #HT000043

Document Title: Check Heater Cartridge

Product(s): T-1000

Procedure:

Turn **"Main Power" OFF.**

Attached to the **Main Air Cylinder** by cable-ties, you will see a 2-pin white connector. It will have a white wire and a purple wire. The white and purple wires go to the IF Board. You may have to cut some wire ties.

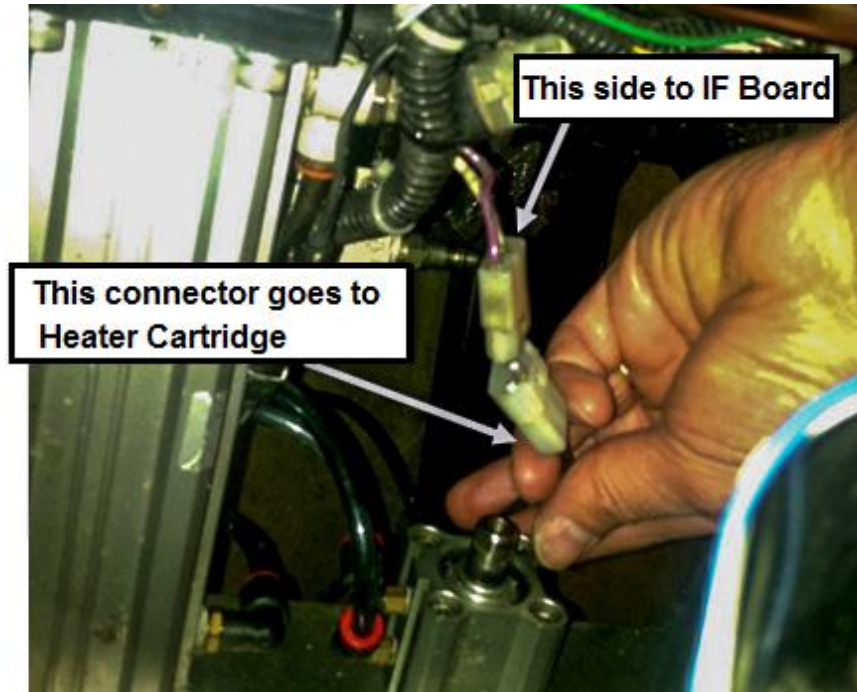

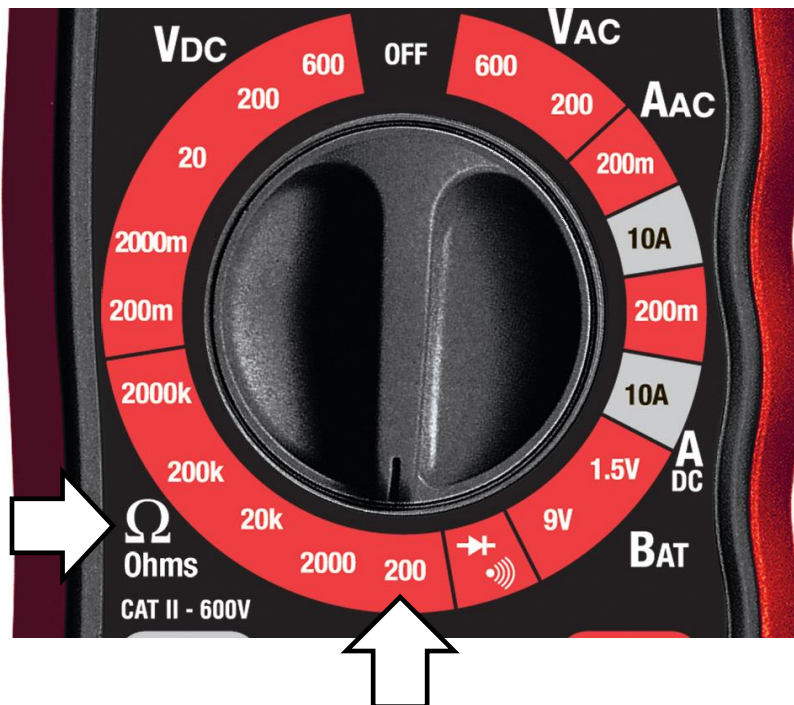

White & Purple wires to IF Board

Black wires to Heater Cartridge

Air Cylinder

Gently disconnect the connector.

Now set your meter to Ohms of resistance, at the lowest range. The Ohms symbol (Ω) looks like an omega symbol, or upside-down U.
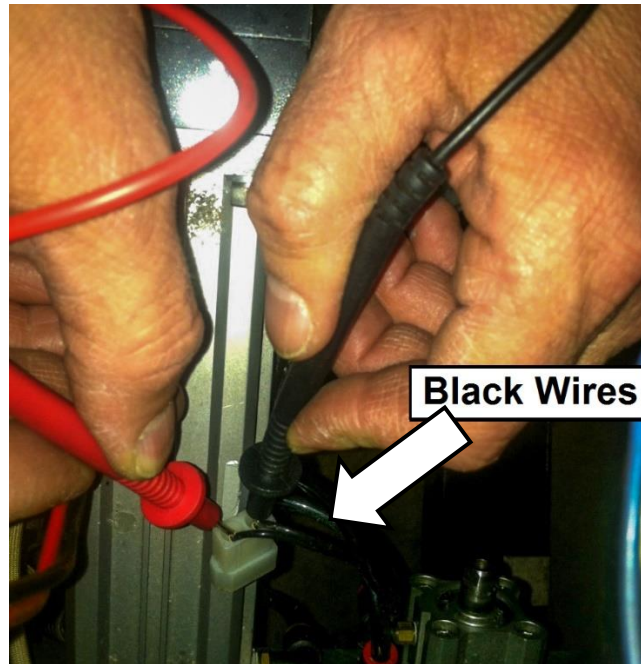

How To
Service Documents from APPI

Put your test leads on the two pins in the **Heater Cartridge** connector.

Black Wires

If the **Heater Cartridge** is good, your meter should read approximately 18 Ohms on a 110 Volt Bagger, and 60 Ohms on a 220 Volt bagger.
